in this volume matthew I jockers introduces readers to large scale literary computing and the revolutionary potential of macroanalysis a new approach to the study of the literary record designed for probing the digital textual world as it exists today in digital form and in large quantities using computational analysis to retrieve key words phrases and linguistic patterns across thousands of texts in digital libraries researchers can draw conclusions based on quantifiable evidence regarding how literary trends are employed over time across periods within regions or within demographic groups as well as how cultural historical and societal linkages may bind individual authors texts and genres into an aggregate literary culture moving beyond the limitations of literary interpretation based on the close reading of individual works jockers describes how this new method of studying large collections of digital material can help us to better understand and contextualize the individual works within those collections
